(54) AUDIO EQUIPMENT FOR CAR

COPYRIGHT: (C)1981,JPO&Japio

(57) Abstract

PURPOSE: To save the trouble like sound volume decrease during call and to avoid the delay in response, by decreasing the sound volume of radio receiver in interlocking with the off-hook of a handset for car telephone.

CONSTITUTION: The handset of a car telephone set is the type mounted on a stand, and a handset position detecting switch 5 is fitted to this stand. In an audio equipment, the audio signal picked up from a tuner 11 or a signal from a tape recorder 14 is given to a preamplifier 13 via a radio cassette change-over switch 12. Further, the signal amplified at the preamplifier 13 is fed to a power amplifier 16 via a volume 15 and a handset position detecting switch 5 and output from a speaker 17. Further, when the handset is picked up from the stand, the contact of the detection switch 5 is changed over, and since the output of the preamplifier 13 is input to a resistor 18 with greater resistance value, the audio output signal can automatically be reduced.
